NVIDIA × MICROSOFT

Enterprise Model Risk Management Taxonomy v0

This list is illustrative and not comprehensive of all risk categories and types. Specific risk probability will depend on deployment and use case.

5
L1 RISK CATEGORIES

30
L2 RISK TYPES

1 Cybersecurity

5 RISK TYPES

Downstream risks from misuse or compromise.

- Malicious Code Generation *(Malicious Execution Risk)*
- Malicious Tool Call Generation *(Malicious Input Handling Risk)*
- Model Safety Policy Extraction *(Disclosure and Evasion Risks)*
- Excessive Token Generation *(Resource Exhaustion Risk)*
- Misaligned Generation against System Goal *(Loss of Control Risk)*

2 Data Protection

6 RISK TYPES

Exposure or misuse of private and proprietary data.

- Unauthorized Disclosure of Training Data
- Inferred Sensitive Data / Data De-Anonymization
- PII Disclosure
- Model Theft
- Model Distillation
- Multi-Tenant Isolation Failures

3 Content

7 RISK TYPES

Harmful, unlawful, or unreliable model outputs.

- Hate, Harassment, and Violence
- Child Safety
- Sexual Content, Including Non-Consensual Sexual Imagery
- Production of Copyrighted Data
- Regulated Advice, High-Impact Public Decisions, and Illegal Activity
- Information Integrity
- CBRNE & Weapons Uplift

4 Human–AI Interaction

7 RISK TYPES

Harms arising from inappropriate use or interactions.

- Manipulation
- Deception
- Dark Patterns
- Anthropomorphism
- Overreliance
- Inappropriate Relationships
- Sycophancy

5 Bias

5 RISK TYPES

Skewed treatment of people, groups, and viewpoints.

- AI Profiling
- Depiction
- Marginalization
- Ideological (Geopolitical, Political & Religious Bias)
- Censorship

RISK CATEGORY (L1) High-level grouping to organize risk types stated at a level appropriate for executive or Board-level reporting. There are five.

RISK TYPE (L2) A more granular breakout of risks that may arise under each broad L1 describing the mechanism or domain through which that harm arises. Functional owners and subject-matter experts are assigned here. There are 30.

OUT OF SCOPE systemic risks from broader AI adoption · downstream consequences of model outputs · performance and operational considerations · methods for governing or managing risk (observability, mitigation technique, provenance).
